

DieEstimator

The die estimating standard

The Die Cost Estimating Solution

The only fully customizable die cost estimating software

DieEstimator simplifies the die cost estimating process. It was created by experienced die engineers who understand the challenges estimators face.

Why DieEstimator?

- Estimate any die type
- Fast and consistent results
- Easy to learn, ready to use
- Estimate from 3D or 2D data files
- Integrated die construction specifications
- Built-in estimating assistance
- Online training and knowledgeable support
- Win more jobs, achieve higher profits
- Fast ROI

Key Features

- Station estimator/planner
- Die sizing and press selection
- Manage estimates from start to job cost
- Mobile application
- Multi-user, multi-site
- .pdf and .csv (Excel) reports
- Cost calibration tools

Logical Estimating Process

DieEstimator guides you through a logical step-by-step estimating experience. All estimates begin with basic project information and result in a detailed estimate report.

Configured for Your Business

DieEstimator is not a one-size-fits-all solution. Standards and settings are configured to reflect the way you build dies.

Integrated Die Specifications

A significant cost driver in die cost estimating is die design and construction options. DieEstimator provides industry standard die classes, or create your own customer-specific standards.

DieTarget Software

Create target die cost estimates in about 5 minutes with minimal die experience. Stop waiting on die shops for quotes.
